CrossFlex

The CrossFlex synthetic turf system series is the ideal selection for because it guarantees a win-win, combining a unique fiber-blend from two of our MVP systems. The primary backing is built tough to make sure the turf won't wrinkle and move over time. The secondary polyurethane layer keeps the fibers locked tightly in place. Infilled with sand rubber mixture or the infill of your choice, this dual fiber system brings the benefits of wear-resistant slit-film and monofilament fibers together to create the perfect surface with long-lasting durability and optimal performance desired by results fields.

Recommended For You

Within this series, there are many ways you can customize your field, or stack your system as we like to call it! For more information on planning for your new synthetic turf field, to speak to one of our dedicated Field Consultants, or to request a site evaluation, contact us today!
